

K-8 and Division Street Booster Station

This project consists of the design and construction of a new booster pumping station, including piping and appurtenances, in the city of Lancaster. The new booster station will improve the reliability of the water supply in Lancaster by replacing an existing, aging, booster station which will be demolished and hauled away. The new booster station will also be upgraded to accommodate the flows from two additional wells. Construction of the new booster station is scheduled to begin in Fall 2009.
